

At Compass Prep, we are committed to providing a “boutique” education for our students, tailoring an academic track specifically to fit their unique goals. Our innovative **FLEX5** scheduling provides more choices for students who value the time and flexibility to pursue their interests in sports, acting, travel, entrepreneurship, music, work, etc. Students may choose between an on-campus 3, 4, or 5-day school week, (upper level high school students may also choose a 1 or 2-day schedule, depending on their needs) Many students who study independently and off campus, participate in our Directed Studies Program, through which we provide academic guidance and transcript services to prepare them for their next step in life. Whether a student chooses to attend a traditional college or university, a technical college, engage in an internship, take a Gap year for missions or travel, join the military or go straight to work, they will get the preparation and encouragement they need in one of Compass Prep’s flexible options!

In 2018, we introduced our **FLEX5** program, which allows families to choose a schedule which best meets their student’s needs and fits their family’s lifestyle. In addition to our current 3-day **CORE ACADEMIC** program (Tuesday/Wednesday/Thursday), we offer the opportunity for students to attend Compass Prep up to **FIVE DAYS A WEEK** by choosing one or both of our **optional FLEX** days called **Mindset Mondays** and **Friday Focus**. Students in the later high school years are highly encouraged to dual enroll at a local or online college/university, earning their high school diploma and college credits at the same time. Our flexible scheduling enables any student to make that choice.

Mindset Mondays will provide a way for students to start their week strong! With planning sessions to build executive functioning and organizational skills, help in completing the week’s assignments, and a wide variety of centers in which students may freely engage, students get lots of attention and have time to spend in these activities:

- Maker Space to facilitate STEAM learning in the arts and sciences
- Games which promote problem solving, logic and team building
- Blended learning opportunities (utilizing both traditional and online resources)
- Work with adult assistance on individual or collaborative projects in a Project Based Learning environment

Friday Focus will take us beyond the four walls and deep into the classroom of the world, where we will spend the whole day focused on a specific area such as:

- Outdoor excursions such as caving, kayaking and nature hikes
- Attendance to live performances, museums and other attractions which our area has to offer
- Full-day service projects to get beyond ourselves and give to others
- Friday Focus is a time to stretch our wings, go places and meet new and interesting people!
